> Reach your audience

Webcasting & Presentation Recording

With all the hard work, time and investment that goes in to planning a great event, why just share it with the people in the room?

eStream from Saville makes it easy to capture everything that happens at your event and share it with a global audience, whether live or on-demand. We can even bring in remote presenters to your event with our range of enhanced video services.

As work schedules get ever busier, making time to attend events has never been more difficult which is why we developed a suite of video tools to make the world a smaller place. If you need to share your board meeting with another team across the world or broadcast your awards ceremony to an audience of thousands, we have the solution to fit any brief or budget.

Easily record and broadcast presentations exactly as they were delivered, with every slide captured as a crystal clear image, perfectly in-sync with HD video and professional audio. Create a fully hybrid event experience and engage your remote attendees by allowing them to take part in Q&A session, live polls and event feedback.

All our video is hosted and streamed by our secure content delivery network, constantly capturing enhanced analytics showing you exactly how your content is being watched. Our webcasting platform can be configured to suit a wide range of events, from fully secured and encrypted corporate broadcasts, to multi-site video conferencing and online public events.

Whether utilising professional HD multi-camera productions or the webcam on your computer, we will create a complete video strategy for your next project. We can even broadcast your event live to millions via YouTube®!
