### Live Voting & Audience Response Systems

Whether you call them Clickers, Keypads, Buttons or thingymajigs, there is no denying the value of using a voting system at your next event.

With the simple press of a button, Saville eValu8 is one of the most accessible and cost effective ways to add interactivity to your event, large or small. From our many years managing the interactivity at hundreds of events across the globe, we know how to get the most from this technology whether it be an AGM or a Charity Quiz!

Perfectly complementing Microsoft PowerPoint®, the industry standard presentation software, we create fully branded, engaging and interactive presentations that track audience understanding and gauge opinion. Responses can be tracked to individual participants for training exercises or can be anonymised to get some real truths from your audience. Live charts appear on-screen within half a second of responses being polled to show exactly what your participants think.

With hundreds of successful voting events delivered over the past 10 years, we have a very diverse experience base for getting the right information from your audience. Demographic comparisons can be used to gather enhanced data, separating responses from key groups of participants for each question polled.

It's not all serious though! Why not create the full "Game Show" experience for your event and inject some real fun to the proceedings? Real-time scoreboards, custom team names, fastest finger and tiebreakers all add to the buzz.

With market growth and improved technology, the cost of hiring a large audience voting system is within the reach of most budgets and with our competitive rates everyone can be involved!
